

interior planning kit

Our interior planning kit provides architectural scale (1/4"=1'-0") grid drawings for the floor planning along with a dome grid cross-section for planning heights.

We indicate where extensions can be attached and give you cut-outs for planning them.

We show you possible window patterns. You are also given the orientation of the skyloft and view cupola.

We don't expect you to plan out every detail of your dome home. We will take your basic ideas and finish them...but some people never got over the paper doll cut-out stage.

We provide an extensive group of furniture and appliance cut-outs that match the scale of your grid floor plans. Cut-outs for living rooms, dining rooms, bedrooms, baths, kitchens, closets, garages, and misc. items.

You may have some special items that with a tape measure and our scale ruler provided, you can measure your actual piece and make a scale model cut-out.

Included is a design program questionnaire that we have you fill out and return along with your layout ideas. We can then plan a dome based on you alone.

If you want to use your computer for drawing, you need to have a C.A.D. program (even a "low-end" system) that imports DWG or DXF files. We can then send you a computer disk with an Interior Planning Kit similar to our paper copy. See out price list.

If you are at all interested in a custom dome plan, then you need this kit.

The more effort you put into the planning process, the better your house will function as an environment for your particular family and site.
